Subject Index

A

ADA
- prototypes of, 16:255
- requirements specification for, 15:173

ADABAS, hybrid data base management system, 14:199

Algebraic specification framework, 15:33, 15:43

Algorithms
- asynchronous operations in disk-buffer-cache memory, 16:243
- commutative and associative function evaluation with distributed, 16:53
- data compression/expansion, 15:233
- dynamic load balancing and decentralized, 16:37
- file replication in distributed system, 14:173
- imprecise computer systems and scheduling, 15:261
- interactive text formatting and incremental, 16:3

ALPHA, text formatting system, 16:3

Architecture design, fault-tolerant systems and, 14:155

Architectures, safety-oriented two-version architectures, 14:155

Automated software testing, overview of, 15:133

Automation. *See* Software automation

B

Binding, programming languages and, 14:31

C

CAD. *See* Computer-aided design (CAD)

CASE environment prototypes, 15:5

CASE tools, (editorial), 14:131

Chunk, definition of, 16:197

Collaboration, real-time, 16:85

Communication chasm, (editorial), 15:1

Commutative and associative functions, distributed algorithm for, 16:53

Complexity measurement experiments, 16:141

Complier construction, 16:3

Computer graphics approach, course schedules and, 15:149

Computer performance management, 14:215

Computer systems, imprecise, scheduling algorithms for, 15:261

Computer utilization, industry study of, 16:75

Computer-aided design (CAD) system, high-performance software development and, 15:139

Computing service quality, user-oriented approach to, 16:185

Concurrent processing, 16:107, 16:121. *See also* Parallel processing

Consistency checking, process interface modeling and, 15:185

Constructive Cost Estimation Model (COCOMO), 16:235

Cost estimation, software, 14:67, 15:107, 16:235

Course schedules, computer graphics approach to, 15:149

CPS, language independent programming environment, 14:3

D

Data base management systems (DBMS)
- conventional, 16:219
- design, 16:219
- integration of heterogenous, 15:251
- performance of hybrid, 14:199
- relational deductive, 15:217

Data compression/expansion algorithm, 15:233

Data flow diagrams (DFD)
- formal definition and verification of, 16:29
- input/output interface descriptions of, 15:185
- structured analysis (SA) specifications and, 15:193

Data items, blueprint documentation and U. S. Department of Defense, 14:103

Data usage analysis, 15:205

DataCheck, data usage analysis with, 15:205

Dataflow anomoly detection, 16:197

Dataflow model, concurrent processes using, 16:107

DATALOG, 16:197

Debugging, 16:135, 16:197

Defense Science Board Task Force on Military Software, review of, (editorial), 14:1

Design diversity, fault-tolerant systems and, 14:155

Design. *See* Software design

Development. *See* Software development

Dictionaries, data compression using hierarchical, 15:233

Disk-buffer-cache memory, algorithms for asynchronous operations in, 16:243

Distributed system, file replication in, 14:173

Documentation blueprints, U. S. Department of Defense data items and, 14:103

Documentation delivery systems, 16:129

Dynamic binding, 14:31

Dynamic updating of programs, 14:111

E

Education
- novice use of computer application software, 15:279
- software engineering education and software maintenance, (editorial), 14:65
- software engineering, (editorial), 14:65
- software engineering curriculum, 14:147

Environment
- binding in programming languages and, 14:31
- software, 14:17

European Strategic Programme for Research and Development in Information Technology (ESPRIT), 15:3

Event sequence, 15:205

Extended Backus-Naur Form (EBNF) grammar, conversion of, 16:17

F

Fault-tolerant systems, design diversity and, 14:155

File replication, locally distributed system and, 14:173

File transfer, decentralized algorithm for dynamic load balancing with, 16:37

Formal methods, software engineering heuristics vs., (editorial), 15:103

4GLs, (editorial), 14:131

G

GANDALF, language independent programming environment, 14:3

GRASPIN
- communicating in software engineering environments (SEE) with, 15:83
- overview of, 15:5
- Predicate-Event nets (PrE-nets) and, 15:43
- software engineering environment of, 15:3
- specification language, SEGRAS, 15:17, 15:33, 15:43

design principles and architecture of, 15:75

H

Heuristics, software engineering formal methods vs., (editorial), 15:103
Hospital information systems, heterogenous data base integration in, 15:251
Human systems content, software engineering and, 14:147

I

I/O behavior, 14:51
IMS, hierarchical data base management system, 14:199
Information Flow Nets (IFNs), system design and refinement with, 15:239
Information gathering, problems with, (editorial), 15:203
Information systems
hospital, 15:251
organizational, 16:75
Input/output interface descriptions, data flow diagram (DFD) and, 15:185
Instruction modules, novice use of computer application software and, 15:279
Interface modeling process, 15:185, 15:193, 15:199
Interfaces, hybrid, 16:169
IPE, language independent programming environment, 14:3

K

Knowledge base data, 16:205

L

Language independent programming environments, 14:3
Languages
DATALOG, 16:197
dynamic binding in strongly types programming, 14:31
functional, 16:69
graphical vs. textual, 14:133
high-level tools for language implementation, 15:115
SEGRAS, 15:17, 15:33, 15:43
SISAL, 16:69
software engineering environments and flexible environment, 14:17
SUSL, 16:255
technical concept definitions, 14:39
Lines of code, software sizing and, 15:159
Literature searches, problems with, (editorial), 15:203
Load balancing, decentralized algorithm for dynamic, 16:37
Load sharing and parallel processing among workstations, 14:163

M

Maintenance. *See* Software maintenance
Management role
software productivity and, (editorial), 16:167
software quality and, (editorial), 16:83
MENTOR, language independent programming environment, 14:3
Misinterpretation. *See* Software misinterpretation

N

nvcc, 16:135

O

Objects
jointly owned, 16:85
software engineering environments and, 14:17
On-line software documentation systems, 16:129
Operating-system support, jointly owned objects and, 16:85
Operator sequence analysis, 15:205
Operator sequences specification, 15:205
Organizational information services, 16:75

P

Parallel functional programming, 16:69
Parallel processing, 14:163. *See also* Concurrent processing
PECAN, language independent programming environment, 14:3
Peopleware, by DeMarco T., Lister T., Dorset House, 1987 review of, (editorial), 16:83, 16:167
Petri nets
Information Flow Nets (IFNs), 15:239
parallel programs and, 16:121
Predicate-Event nets (PrE-nets), 15:43
Petri net-based process model (PNP model), 15:63
system design and refinement with, 15:239
Precedence relation, data flow diagrams (DFD) and, 16:29
Predicate-Event nets (PrE-nets), prototype and analysis of non-sequential systems using, 15:43
Printed software documentation systems, 16:129
Process interface modeling, consistency checking and, 15:185
Process models, 15:63
Processing, concurrent, 16:107, 16:121
Processing, parallel, 14:163
Processing elements (PE), SEGRAS and, 15:43
Program behavior, I/O activity, 14:51
Program comprehension, 14:79
Programmer productivity, 16:151
Programming
dynamic binding in strongly typed languages, 14:31
language independent programming environments, 14:3
object-oriented model, 15:107
parallel functional, 16:69
programming style taxonomy, 15:287
Programs
ADA, 14:183, 15:173
ADABAS, 14:199
CPS, 14:3
dynamic updating of, 14:111
GANDALF, 14:3
GRASPIN, 15:3, 15:5, 15:17, 15:43, 15:75, 15:83
IMS, 14:199
IPE, 14:3
MENTOR, 14:3
PECAN, 14:3
PROLOG, 16:17, 16:205
SCR, 14:67
software maintenance and dependencies in, 14:97
symbolic execution of concurrent, 14:183
TOOLS, 15:115
PROLOG
clustering PROLOG KB data, 16:205
specifying textual to graphic conversion, 16:17
Prototypes, development of, 16:255

R

Refinement procedure, Petri nets and, 15:239
Relational deductive data base systems, 15:217
Remote Execution Manager (REM), 14:163
Research, structured, (editorial), 16:1

S

Scheduling algorithms, imprecise computer systems and, 15:261
SEGRAS, GRASPIN specification language, 15:17, 15:33, 15:43
Service management, 16:185
Service-level index (SLI), service quality management and, 16:185
SISAL, functional language, 16:69
Software
automation, CASE tools and 4GLs, (editorial), 14:131
complexity, measurement of, 16:141
Defense Science Board Task Force on Military Sofware, (editorial), 14:1
computer application, novice use of, 15:279
construction, stochastic models for, 16:59
Constructive Cost Estimation Model (COCOMO), 16:235
dependency analysis, reusable toolset for, 14:97

design
computer-aided design (CAD) system in, 15:139
graphical vs. textual design tools, 14:133
safety-oriented two-version architectures, 14:155
terminology clarification and, 14:39
development
ADA and PL/1 prototypes, 16:255
Constructive Cost Estimation Model (COCOMO), 16:235
cooperative, 16:97
costs in, 14:67, 15:107
effort estimation in, 15:159
GRASPIN and, 15:5, 15:43
jointly owned objects for collaboration, 16:85
management role in, (editorial), 16:83
programmer productivity and, 16:151
Software Development Environments (SDE), 15:75
software engineering environments, 14:17
documentation delivery systems, 16:129
engineering
curriculum for, 14:147
definition of, 15:91
education, (editorial), 14:65
environments, 14:17
formal methods vs. heuristics, (editorial), 15:103
GRASPIN, 15:3
hybrid interface of command language and direct manipulation, 16:169
processes, formal models of, 15:63
Software Engineering Database (SEDB), 15:75
software engineering environments, 14:17
software engineering environments (SEE), GRASPIN and, 15:83
technology transfer in, (editorial), 15:1
maintenance, (editorial), 14:65
costs of, 14:67
documentation blueprints and data items, 14:103
measuring software misinterpretation, 14:85
program comprehension and, 14:79
program dependencies and, 14:97
program updating, 14:111
metrics, 16:229
misinterpretation, measuring, 14:85
objects, software engineering environments and, 14:17
process modeling, Petri net-based process model (PNP model) and, 15:63
productivity, management role in, (editorial), 16:167
quality, (editorial), 16:83
quality metrics, graphical vs. textual design language with, 14:133
research crisis, (editorial), 16:1
science, stochastic models for, 16:59
sizing, structured analysis metrics in, 15:159
specifications, Ada, 15:173
testing, automated, 15:133
Specification languages
SEGRAS, 15:17, 15:33, 15:43
TOOLS, 15:115
Specifications
algebraic, 15:33, 15:43
SEGRAS, 15:17, 15:33, 15:43
Stochastic models, software construction and, 16:59
Structured analysis (SA) specifications, data flow diagrams (DFD) and, 15:193
Structured research, (editorial), 16:1
SUSL, abstract data type specifications with, 16:255
Symbolic execution of concurrent programs, 14:183
Syntax diagrams, grammar conversion into, 16:17
System design, Petri net model for, 15:239
System performance evaluation, 16:185

T

Taxonomy, programming style, 15:287
Technical concepts, language and system for definitions of, 14:39
Technology transfer, software engineering and, (editorial), 15:1
Terminology, clarifying, 14:39
Test coverage, 16:135
Text formatting, incremental algorithms for interactive, 16:3
Textual forms, graphic conversion of, 16:17
TOOLS, language implementation with, 15:115

U

U. S. Department of Defense data items, documentation blueprints and, 14:103
Updating programs, 14:111, 14:173
User-Tool Interaction Subsystem, 15:83

V

Verification conditions, 14:183
Version control, 16:219

W

Well-behavedness, Petri nets and, 15:239
Workstations, load sharing and parallel processing among, 14:163
